A 1-kg mass at a height of 1 meter has a potential energy of 1 Joule. A 1-kg object falls from a height of 10 m to a height of 6 m. The final potential energy of the object is approximately 40 J. If work is done on an object by a non-conservative force, then the object will either gain or lose potential energy.

A wave's energy is proportional to its amplitude squared (or). This is true for waves on guitar strings, for water waves, and for sound waves, where amplitude is proportional to pressure. In electromagnetic waves, the amplitude is the maximum field strength of the electric and magnetic fields. (See [link].)
